

FETE FINANCE

TOKEN WHITEPAPER

OVERVIEW

More generally the average ROI (Return On Investment) trading on the blockchain has been subject to Staking, Farming and Liquidity Mining. The innovation of DeFi has brought an opportunity for holders to idly profit without Staking or Farming through the Fete Finance Strategy.

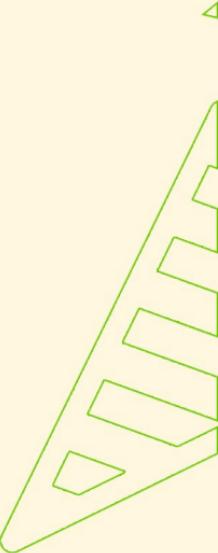

OUR VISION

Fete Token is a deflationary, community-driven BEP-20 token built on the Binance Smart Chain; launched on 5th of May, 2021. Aimed at creating 'a cause for celebration' (Hence the name FETE) in our community by tuning down the effects of economic devaluation caused by the COVID-19 pandemic on members of our community.

Benevolence is a major aspect of our growth, this engineers the implementation of redistribution of a tangible portion the fees taxed for each transaction to holders' wallets. Also demonstrating transparency in all affairs concerning the token at the same time.

We also set our sights on more deals and use cases for the benefits of the holders.

OUR MISSION

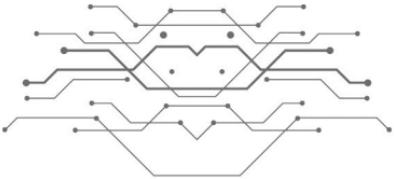

Also demonstrating transparency in all affairs concerning the token at the same time.

We also set our sights on more deals and use cases for the benefits of the holders.

Although subject to impermanent loss; a string of ideas have been put together and adopted by The Fete Finance Developers to guarantee overall profit for Holders.

The ideas are;

1. Deflationary Supply. [Max Total Supply: 1,000,000,000,000]
2. Tokenomics.
3. Organic Growth.

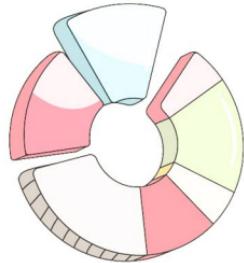

OUR VISION **DEFIATIONARY SUPPLY**

The price of a token is basically influenced by circulating supply and market cap (high market cap + low supply = good price), and secondarily by the events that affect both supply and market cap.

The idea of deflationary supply attacks particularly the supply by reducing it by 4% of the amount of tokens involved in every transaction carried out on the Fete Finance Smart Contract. If the transaction is a long order (which means increase in market cap) then both criteria have been met for a price surge.

OUR VISION **TOKENOMICS**

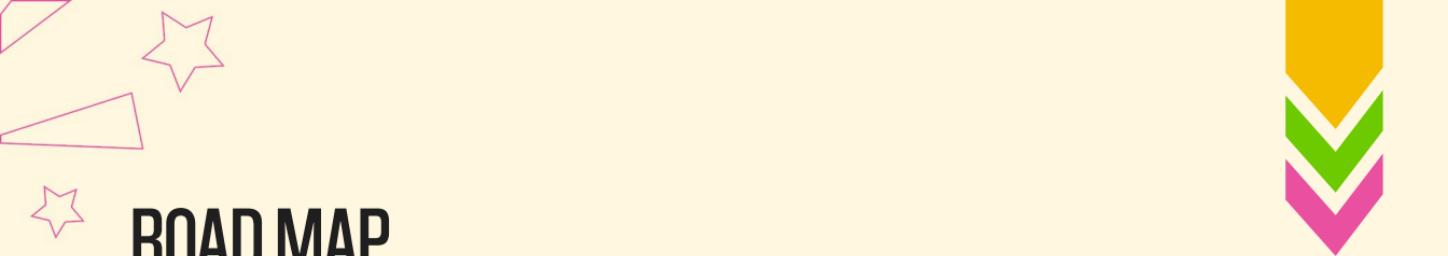

The Fete Finance Smart Contract taxes an 8% fee for every transaction. Half of which (i.e 4% each) is fuel for implementation of the Deflationary Supply system while the other half is split equally into two(2% each); with the first portion added to an auto-lock liquidity pool and the other redistributed to the current holders proportionally to their token wallets.

Increased portfolio and Reduced supply on each transaction carried out is a reward to HODL. This tokenomics setup is embedded in the development of our Smart contract from the time of launch

OUR VISION **ORGANIC GROWTH**

The token is community driven, hence an anti-whale policy has been put in place for holding and transaction. A maximum order limit of 5Trillion tokens (both long and short orders) and also a maximum amount of tokes limit for all holders are embedded in the development of Fete Token. Thereby abating unhealthy volatility and excessive dumping by whales who want to take advantage of our community.

ROAD MAP

Q1 LAUNCH

- Fair Launch
- Token Burn (50%)
- Website redesign
- Community growth
(Promotions and Marketing)
- Whitepaper

Q1 2021

- Coinmarketcap & Coingecko listing
- Trustwallet & Unirocket Listing
- Partnership with Crypto Leaders
- Promotions nonstop

Q2 2021

- CEX Listings
- Certik Contract Audit
- Community votes, events
and competitions

Q3 2021

- Partnership with Fundraisers & Charities
- Diversification into real-world use cases
- Listing on established exchanges
- Further ecosystem development

SUMMARY OF THE FETE FINANCE STRATEGY

The Fete team (Anonymous tech and crypto enthusiast who are members of our community) employs the under-listed techniques to ensure holders funds are SAFU

1
ANTI-WHALES
POLICY

2

SAFETY AND TRANSPARENCY

The safety of our holders' funds is paramount in all our strategies. All contracts are transparent and accessible on the Binance Smart Contract;

<https://bscscan.com/token/0xb45dd6ca4962ff378102339da447e1d9d06531d4>

Also with emphasis to the longevity of the project, 25% of fees taxed on every transaction is added to a liquidity pool which is locked forever automatically.

TOTAL SUPPLY

1,000,000,000,000(Initial)

MAXIMUM BUY

5,000,000,000,000 per transaction

50% burn on launch -
